

How It Works

No oil tankers, coal mines, moving parts or powerlines. We design the ideal system based on your needs for your home. Any way you look at it, it's a better way to do energy

1

SOLAR PANELS

Each panel converts sunlight into direct current (DC) electricity.

2

INVERTER

The inverter converts the DC electricity into alternating current (AC) electricity.

3

UTILITY METER

The meter measures your energy use. When the system produces more power than needed, the meter goes backwards, accumulating credits that offset your electricity use at night.

4

SYSTEM MONITORING

We monitor your system's activity 24/7 and are alerted if any abnormalities occur so we can fix it immediately. Check your system production at any time using the website or the smartphone app.

LOCAL SOLAR, DONE RIGHT

NO MORE MONOPOLIES

Now you have a choice of where and how you buy your energy. More options mean more freedom. Flex your freedom and feel the power of choice.

SAVINGS AND VALUE

Get the same thing for less. If you will spend \$400,000 on energy in your lifetime, and we can save you 30%, that's \$120,000 back in your pocket.

CLEAN ENERGY

Clean energy isn't just about saving the environment. It's about having a reliable energy source that isn't subject to the ever-increasing prices of oil.

WE ARE YOUR NEIGHBORS.

We believe in taking the power out of the hands of monopolies (literally) and putting it in the hands of our customers.
